Product name: **UV-Stabilizer Additive**  
Product code: **CM-AE-1008/PP**

## Product description

CM-AE-1008 is an excellent UV stabilizer additive for PP Tapes and fibers. It is also recommended for thick sections articles. It is synergetic UV stabilizer and provide maximum UV protection to polymer from losing mechanical properties by preventing from light, heat and oxygen decomposition.

## Typical recommendation

This grade is recommended for following applications:

\*Injection molding.

Recommended doses level range 2-5% depending on thickness of end products.

## Typical data

S.No.	Properties	Unit	Specification
1	Carrier Resin	-----	Polypropylene
2	Moisture content	%	<0.1
3	Bulk density	gm/litre	550±100
4	Dispersion at 2% loading with polymer	-	Excellent

**Storage Condition:** Material should be stored in cool and dry place, avoid direct source of heat and sun light.

**Shelf Life:** Shelf life of this grade is 2 years from date of manufacturing under normal storage condition.

**Packaging:** 25kgs PP woven sack bag.

This master batch tested in our lab at our standard testing condition and results may vary under different condition depending upon the accuracy of man and machines. We donot give any liability of the abnormality occurs during processing. This is the sole responsibility of user and this is recommended to test the material for suitability of the grade.
